

ALWIYAH NUR SYAHIRA ALHADDAD

087885602646 | syahiiralhaddad@gmail.com | www.linkedin.com/in/syahiralhaddad | www.github.com/syahiiralhaddad

Electrical engineering graduate with an analytical, problem-solving, and detail-oriented mindset, driven by a passion for technology, data-driven analysis, and project management. Experienced in translating technical findings into clear recommendations for stakeholders, and in leading cross-functional initiatives from planning to execution.

WORK EXPERIENCES

Cybersecurity & Emerging Technology Risk Analyst Intern

Otoritas Jasa Keuangan

August 2026 — Present

OJK is an independent state institution with the authority to regulate, supervise, examine, and investigate Indonesia's financial services sector.

- Developing a sector-level ransomware incident response playbook that gives commercial banks one escalation path, RACI matrix, and decision tree to follow during an active incident.
- Reconstructing real banking incidents into kill chain flowcharts and attack timelines mapped against MITRE ATT&CK and NIST frameworks to identify where detection and containment failed.
- Assessing post-quantum cryptography risk exposure and analyzing regulatory frameworks to translate the findings into policy recommendations reviewed by stakeholders up to Deputy Director level.

Project Control Engineer (Project-Based Contract)

PT Aspen Medical Group Indonesia

July 2026 — August 2026

Aspen Medical Group Indonesia is an Australian-based global healthcare company providing outsourced medical services, emergency field hospitals, and healthcare logistics.

- Established the company's first formal Tender SOP, coordinating vendor submissions and reviewing contract revisions against stakeholder comments.
- Consolidated ICT and MEP documentation from 20+ contractors into a single Excel dashboard, giving the Project Manager one view of approval status and project timelines.
- Prepared project financial reports in Oracle and reconciled contracted quantities against material actually received on site, surfacing discrepancies before they were invoiced.

Issue to Prevention Engineer Intern

PT Schneider Electric Indonesia

July 2025 — May 2026

Schneider Electric Indonesia is an energy management and digital automation specialist delivering efficiency solutions and smart factory technologies across industrial sectors.

- Led the Issue to Prevention (I2P) program, resolving 50+ customer cases in Salesforce and building preventive action plans from recurring complaint patterns.
- Replaced manual warranty return tracking with a Power Apps and Power Automate workflow built using Agile methodology, integrating SAP and SharePoint data into one submission form now used by the technical support and logistics teams, with Power BI dashboards for claim visibility.
- Analyzed product performance and complaint data to identify recurring failure drivers, presenting recommendations to stakeholders for quality and compliance improvements.

Product Domestic I Operation Intern

PT Pertamina International Shipping

February 2025 — March 2025

Pertamina International Shipping is the integrated marine logistics subholding of Indonesia's state-owned oil company, specializing in energy transportation and tanker management.

- Managed 50+ vessel certificates in the Port Management System, keeping documentation valid through on-hire and off-hire transitions for the domestic product fleet.
- Maintained a certification tracking system flagging upcoming renewals early so Marine, Operations, and Legal could act ahead of deadlines.
- Delivered fleet compliance reports identifying where documentation delays caused downtime, with recommendations to shorten the renewal cycle.

Datacomm Product Management Intern

PT Telkom Indonesia (Persero)

July 2024 — August 2024

Telkom Indonesia is the country's largest state-owned telecommunications and digital technology company, providing nationwide broadband, mobile, and digital infrastructure services.

- Analyzed bandwidth usage across 8 corporate hub and spoke networks, sampling 5 spoke sites per hub, using Cisco vManage and Python-based models to find sites where allocation did not match actual usage.
- Designed a data center dashboard in Excel with network administrators to consolidate manual reporting into one network capacity view.
- Managed the product pricing strategy timeline, coordinating cross-functional input so pricing decisions were finalised ahead of the release window.

EDUCATION

Universitas Indonesia, Depok, Indonesia
Electrical Engineering | Telecommunications
GPA: 3.60/4.00

2022 — 2026

ORGANIZATION EXPERIENCES

Business Analyst Officer

Indonesian Youth Diplomacy

February 2024 — December 2024

Indonesian Youth Diplomacy is a youth organization representing Indonesia in international forums such as the Y20, focusing on policy dialogue and national development agendas.

- Managed pitch materials and sponsorship documentation for Gala Indonesia Emas 2045, refining sponsorship packages and panelist engagement strategies with stakeholders.
- Planned and executed project rundowns for both flagship events, including the 2024 Gala Dinner, keeping timelines aligned with strategic objectives.
- Led cross-functional coordination and workflow evaluation, tracking milestones to keep delivery on schedule and the attendee experience smooth on event day.

PROJECTS

5G Traffic Classification System Using Stacking Ensemble Learning with XAI and Time Series Analysis

August 2025 — 2026

An undergraduate thesis classifying 5G network traffic using stacking ensemble learning, with Explainable AI and time series analysis deployed in a Flask dashboard.

- Designed a stacking ensemble classifier combining KNN, SVM, and Random Forest with Logistic Regression as meta-learner, reaching 99.95% test accuracy across 65,766 traffic records.
- Integrated Explainable AI through LLM-based feature explanations and time series analysis to interpret traffic behavior across weekday and weekend periods.
- Developed an interactive Flask dashboard with live training progress, temporal analytics, and XAI-driven insights for end-user interpretation

Machine Learning-Based Regression Methods on Battery RUL Prediction

October 2024

A Python project predicting battery Remaining Useful Life (RUL) from charge/discharge cycle features of 14 Li-ion batteries.

- Implemented Linear and Ridge Regression from scratch in NumPy (Normal Equation) on 15,064 battery cycles, with data cleaning, z-score scaling, and correlation analysis.
- Achieved test R^2 of 0.9998 and MAE of 3.35 cycles, and tested 6 regularization strengths (α) to analyze their effect on model performance.

Machine Learning-Based Bandwidth Optimization for Cisco SD-WAN Using Random Forest Methods

August 2024

A Python project recommending bandwidth allocation for Cisco SD-WAN customers from Cisco vManage interface data across 8 hubs.

- Prepared Cisco vManage interface datasets, engineering lag, rolling, and utilization features from throughput patterns.
- Trained a Random Forest model to recommend optimal bandwidth allocation per interface, tuning hyperparameters with time-series cross-validation and cutting forecast error by 69% compared with a baseline (R^2 0.90).
- Built SARIMAX forecasting and 4-level threshold-based anomaly detection to flag bandwidth usage spikes.

CORE COMPETENCES

Skills – Project Management, Business Analysis, Data Analysis, Data Science, Quality Assurance, Process Improvement, Machine Learning, Network Analysis, Dashboard Development, Root Cause Analysis, Automation (Power Platform), Data Visualization, Documentation & Compliance, Product Pricing & Strategy.

Interpersonal – Reliable, Critical Thinker, Problem-Solver, Adaptive, Negotiation, Collaborative, Effective Communicator, Detail-Oriented.

Tools – Microsoft Office Suite, Google Workspace, SQL, Python, Oracle, SAP MM, Salesforce, Power Apps, Power Automate, Power BI, Tableau, Cisco vManage, MATLAB, Figma, Canva.

Languages – Proficient in Bahasa Indonesia and English.

Certification – IBM Data Science Professional Certificate (May 2026), IBM AI Product Manager Professional Certificate (November 2025), Nokia Bell Labs E2E 5G Foundation (December 2024), Schneider Electric Professional Trainings (August 2025), Accenture Digital Skills: Digital Marketing (June 2023).

Awards – Best Presenter, FORTEI-ICEE 2026 (September 2026): presented the paper "Traffic Classification for 5G Service Classes Using Stacking Ensemble Learning and Time Series Analysis with Integration of Explainable Artificial Intelligence (XAI) and Interactive Dashboard."
